- Suitable for Breeding and Koerung
- Suitable for Breeding
- Breeding Ban

Recorded on: _____
ADRK Office

HD-/ED-Register No.

_____ Signature

Hints for the X-raying veterinary:

Requirements for official X-rays of the Allgemeiner Deutschen Rottweiler-Klub e.V.

1. The examination of hips and elbows must be done together
2. The animals have to be 15 months old at minimum, for recognizing the evaluation
3. Existing clinical symptoms may require an examination at a considerably younger age. In case of a negative result a later examination is necessary like in 1.
4. Both elbow joints must be X-rayed.
5. Lateral exposure (ML) in bent posture (min 45 °), so the processus anconeus is revealed (see draft)
6. Laying on the chest, legs in front of the body (AP); at a symmetric position, so the medial joint line is not overlaid
7. The X-rays in a size of max. 18 x 24 cm must be of high quality, to show also osteophytes and sclerosis
8. Identification of the X-rays
 - a) Name of the owner and of the dog
 - b) Breed, date of birth, stud-book no., tattoo no., micro-chip no.
 - c) Date of X-raying and side markings

Draft:
